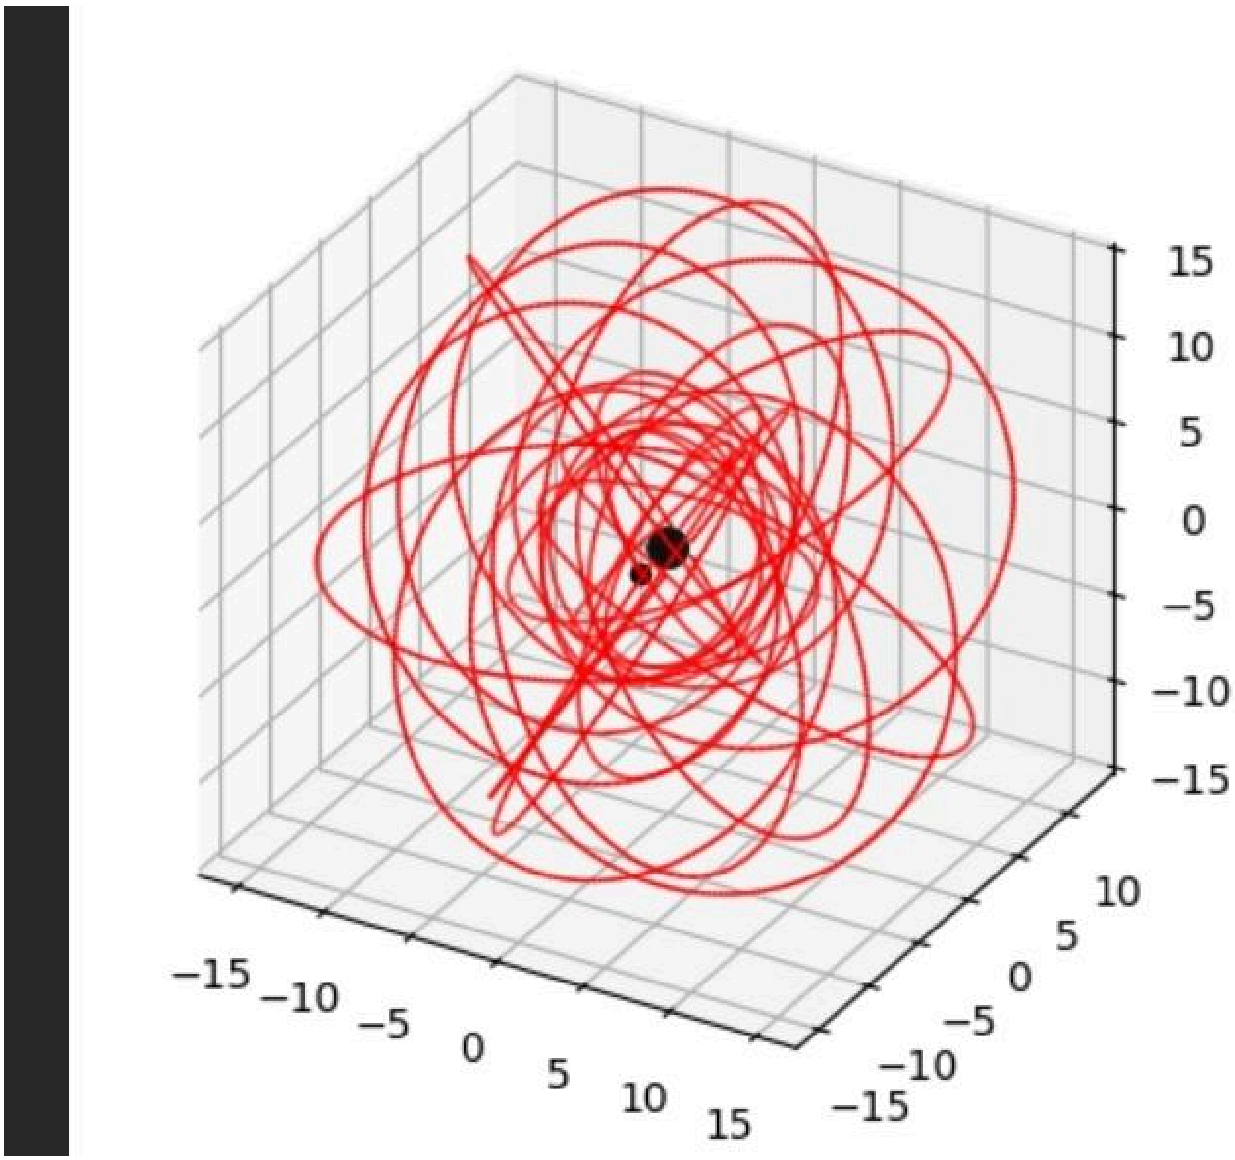
Inputs

Stable Orbit:

1. a = 0.998
2. p = 9
3. e = 0.5
4. inc = 60°

Output

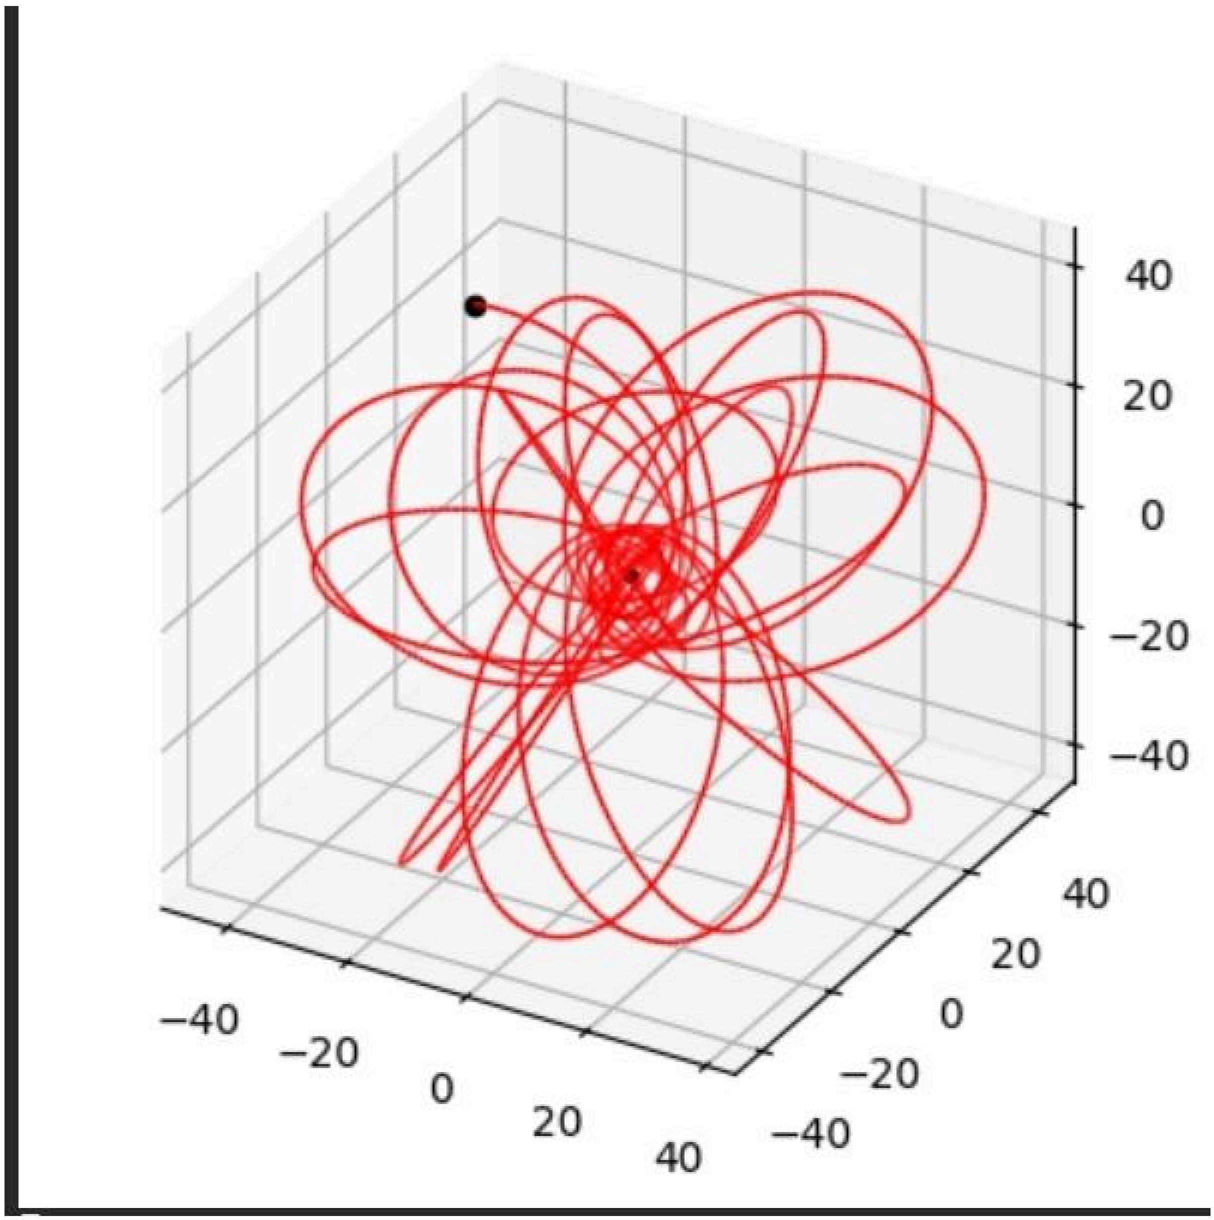


Inputs

Stable Orbit:

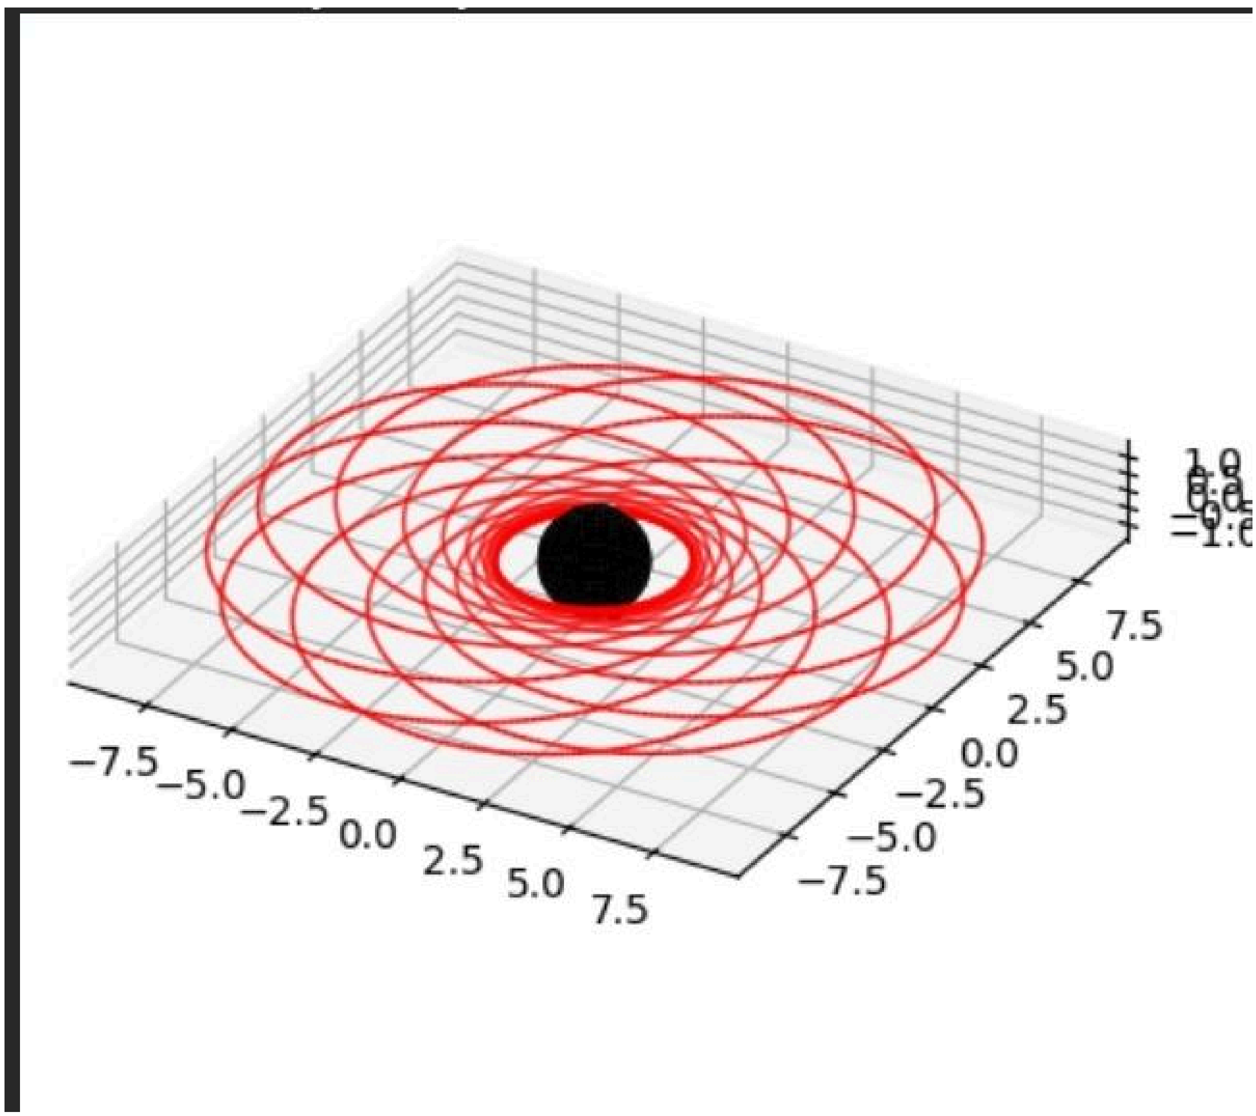
1. a = 0.998
2. p =10 .7
3. e = 0.8
4. inc = 60°

Output



Inputs
Stable Orbit:
1. a = 0.8823
2. p = 4
3. e = 0.6
4. inc = 1.0

Output



Inputs
Stable Orbit:

1. a = 0.972
2. p = 5
3. e = 0.772
4. inc = 60°

Output: Not a stable orbit

Why? Because p= 5 is too small. High value of e and inclination shifts the sparateix outwards, so the orbit is no longer stable.
