

KIC 9832227

Outputs

Why did it fail?

Target: KIC 9832227

Mission: KEPLER

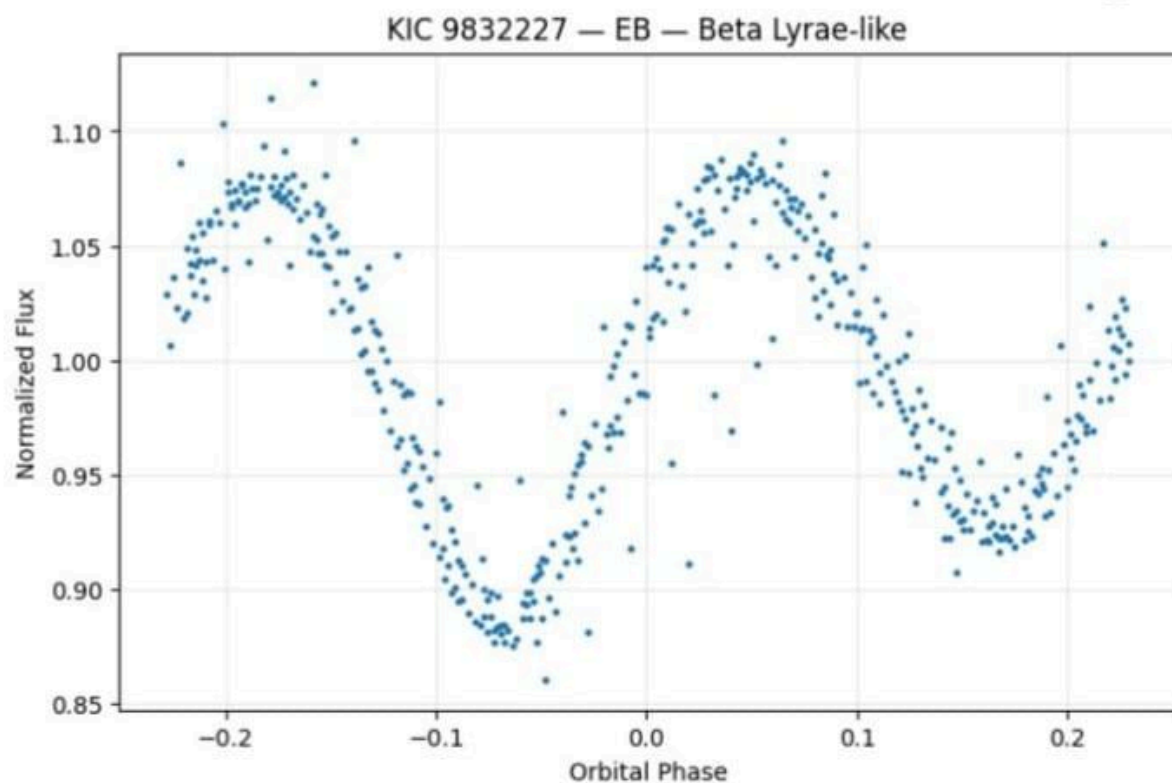

Period: 0.4585 days

Primary depth: 0.1401

Secondary depth: 0.0925

Depth ratio: 0.661

Program classification: EB

Interpretation:

1. KIC 9832227 has an orbital period around 0.458 days, so your BLS result is very close.
2. 9832227 is a contact-type binary. The program suggested its EB instead. It demonstrates a major limitation in the model which is that the decision rule is an inequality for the eclipse depth. This is a classification problem, not a computational one.
